

How to Measure Eye-height and Arm-length of the PSSS Volunteer

- Place end of tape measure against ground and measure the distance straight up to observer's pupil (to the nearest quarter of an inch).

- Have observer hold ruler with an outstretched arm (as during survey).
- Measure distance between observer's pupil and the base of the ruler in their hand (to the nearest quarter of an inch).

Please send measurements to Christine Scheele at christines@seattleaudubon.org
